

CANVIK® A5

A SCANGRIP PRODUCT

Disc Brake Lathe

New, patented model

*Probably the fastest
Disc brake lathe in the world*

Easy and simple operation

- SIMPLIFICATION BY INNOVATION

CANVIK A5 - A SCANGRIP PRODUCT

For more than 25 years we have manufactured and sold the Canvik disc brake lathe to professionals all over the world. We have put all our skills, experience and know how into the development of the new CANVIK A5.

The A5 is mounted directly to the mounting holes of the brake caliper thus turning the brake disc exactly parallel to the caliper.

A5's new patented **ADAPTERSYSTEM** is very **time-saving** and **user-friendly**, since it is very fast to set up and easy to operate. But most important of all is that the **quality of the work is impeccable**, due to the precise automatic centring of the cutting tips on the brake disc. The **Universal A5** fits the majority of all cars and light commercial vehicles.

A5 has **AUTOMATIC IN- and OUT-FEED** of the tool bits and variable feed speed. The intuitive control panel gives you full control of all operations at a glance and guarantees combined with **THE ADJUSTABLE AUTOSTOP** on the in-feed function easy operation and fast results.

A5 is fitted with built-in **LED's** lighting up both sides of the disc.

Quick connection of **THE MOBILE STAND** with carriers for 3, 4, 5 and 6 wheel bolts (4 and 5 are standard).

A5's new, patented **FLEXIBLE TRANSMISSION SYSTEM** is easy to use and timesaving, since there is no machine stand to bring into position. The flexible transmission system also allows the motor to be placed near the ground giving you a safe and even work flow.

The bi-directional variable speed motor is operated from **THE MOBILE STAND**, which also serves as a handy storage facility for the lathe head (when the A5 is not in use). Additional accessories are placed in a handy storage unit.
