

CANVIK® M5

A SCANGRIP PRODUCT

Disc Brake Lathe

New, patented model

*Probably the fastest
Disc brake lathe in the world*

Easy and simple operation

- SIMPLIFICATION BY INNOVATION

CANVIK M5 - A SCANGRIP PRODUCT

For more than 25 years we have manufactured and sold the Canvik disc brake lathe to professionals all over the world. We have put all our skills, experience and know how into the development of the CANVIK M5. The M5 is mounted directly to the mounting holes of the brake caliper thus turning the brake disc exactly parallel to the caliper.

M5's new patented **ADAPTERSYSTEM** is very **time-saving** and user-friendly, since it is very fast to set up and easy to operate. But most important of all is that the **quality of the work is impeccable**, due to the precise automatic centring of the cutting tips on the brake disc. M5 is fitted with built-in LED's lighting up both sides of the disc. The **Universal** M5 fits the majority of all cars and light commercial vehicles.

The **MANUAL** or **AUTOMATIC IN-** and **OUT-FEED** of the tool bits and the variable feed speed combined with **THE ADJUSTABLE AUTOSTOP** on the in-feed function guarantee easy operation and fast results.

Quick connection of **THE MOBILE STAND** with standard adapters (for 4 or 5 wheel bolts). M5's new, patented **FLEXIBLE TRANSMISSION SYSTEM** is easy to use and timesaving, since there is no machine stand to bring into position. The flexible transmission system also allows the motor to be placed near the ground giving you a safe and smooth work flow.

The bi-directional geared motor with variable speed is operated from **THE MOBILE STAND**, which also serves as a handy storage facility for the lathe head when the M5 is not in use. Accessories are delivered in a handy case.
