

WORK LIGHTS OF THE FUTURE

Designed by us. Manufactured by us.

THE SCANGRIP WAY

Creating light and business opportunities

As Europe's leading manufacturer of innovative work lights, SCANGRIP provides the strongest and most comprehensive range of lighting solutions on the market.

We want to be a long-term partner with the primary objective to provide attractive business opportunities that strengthen your market position and expand your business.

As our customer you will be able to select exactly the business setup you want in terms of scope, complexity, and logistics.

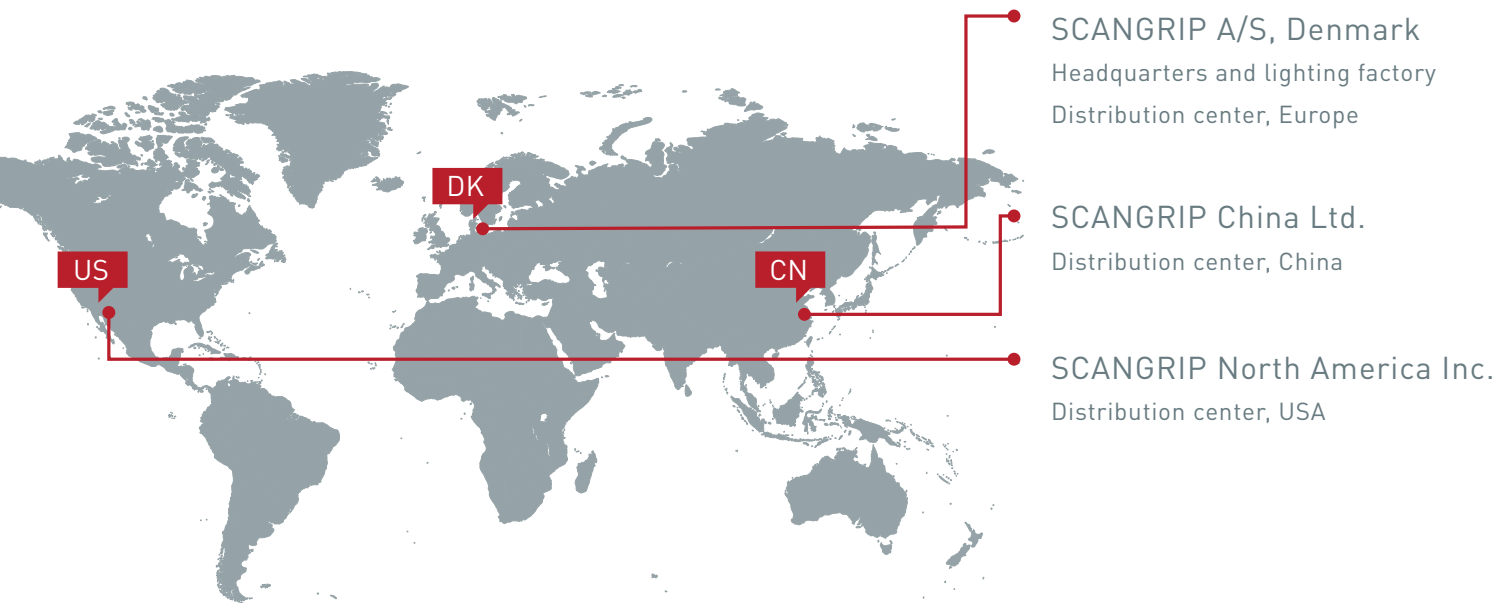

INNOVATION

We act on good ideas. Immediately.

Your challenges and needs inspire us to try new and think new. We act fast and decisions are made confidently and efficiently. In this way, we are always two steps ahead when it comes to developing new and innovative LED work lights.

E.g., the invention of the world's first combined rechargeable and cabled power supply system for work lights (DUAL SYSTEM 2in1) shows our ability to create innovative solutions.

TECHNOLOGY

We push the boundaries. Constantly.

The LED and battery technology are constantly evolving, and due to our distinctive strength, we can take advantage of these multiple technological opportunities. We strive for perfection, and are continuously optimizing and improving light output, operation time, and durability.

E.g., we were the first to develop a floodlight based on COB LED which is now standard all over the market.

FUNCTIONALITY

We create great solutions. Always.

We have the ability to transform input from the market into practical lighting solutions. An elevated degree of functionality is always incorporated into our lighting solutions, and we are continuously optimizing design, ergonomics and user-friendliness to fit the rough and demanding work environments.

E.g., we developed the I-VIEW headlamp with a sensor function and COB LED that lights up the entire field of view because we saw the need for handsfree, improved work light illumination.

CAPABILITY

We make it happen. Fast.

All product design and development are carried out in Denmark. And because everything is manufactured at our own facilities in Denmark or by our carefully selected and preferred partners in China, we keep a firm grip on the quality and logistic challenges. We embrace and fully control all steps from idea to market at tremendous speed.

WORK LIGHTS OF THE FUTURE

WHEN SCANGRIP TURNED ON THE LIGHT

It all began in 1906. A small-town blacksmith developed into a tool manufacturer achieving great success with the invention of the one-hand operated locking pliers. In 1993, SCANGRIP was acquired by Anders Borring who was determined to carry on the success and innovative approach the company was known for.

Over a period, he had been looking into the challenges that modern automotive workshops were facing. He noticed that mechanics were using traditional cabled fluorescent lamps. The technology was outdated, the

solutions were fragile, and the mechanics were struggling to get the optimal work light. "There is room for improvement", Anders Borring thought.

With a passion and fascination for LED lighting and its possibilities, he saw a need for more flexible and user-friendly work light solutions. When SCANGRIP introduced its first LED work light for the professional market, it was a decision that led to a remarkable growth.

Despite strong competition and increasing level of complexity, SCANGRIP was capable of constantly pushing the boundaries of LED and battery technology and developing into Europe's leading manufacturer of high-quality work lights.

In 2021, SCANGRIP became a part of Hultafors Group – a family of premium brands within personal protection, tools, and other equipment for discerning craftsmen with a common mission to create a better day for professional users.

Today, SCANGRIP is a strong, dynamic company moving at the speed of light, creating work lights and business opportunities that strengthen businesses worldwide.
